SUSTAINABLE PACKAGING MANAGEMENT AND COMPLIANCE WITH EU REQUIREMENTS

NIKIPLAST-M LTD.

NIKIPLAST-M Ltd., company identification number BG107562570, with its registered office at 116 Marin Popov Street, Sevlievo, Bulgaria, acting as an economic operator using packaging for the packing and delivery of its products, affirms its commitment to sustainable packaging management, waste reduction and compliance with applicable regulatory requirements.

1. Compliance with Regulation (EU) 2025/40 (PPWR)

NIKIPLAST-M Ltd. takes the necessary measures to ensure that the primary (product), secondary (grouped) and transport packaging complies with the applicable requirements of Regulation (EU) 2025/40 of the European Parliament and of the Council on packaging and packaging waste. The Company monitors regulatory requirements and their implementation deadlines and works closely with its suppliers to obtain the necessary information and documentation concerning the packaging materials used.

2. Supply Chain Management and Traceability

- **Manufacturer declarations**

The Company requests applicable technical information and Declarations of Conformity from suppliers and manufacturers of packaging materials (cardboard, protective materials, boxes, adhesive tape and film) to substantiate the characteristics of the materials used. The documentation received is retained and updated in accordance with applicable regulatory requirements.

- **Material safety (Article 5)**

When selecting packaging materials, the Company takes into account the applicable restrictions on hazardous substances, including the requirement that the combined concentration of lead, cadmium, mercury and hexavalent chromium must not exceed 100 mg/kg, except where exemptions are provided for by law. With regard to per- and polyfluoroalkyl substances (PFAS), the Company monitors the restrictions applicable to the relevant packaging categories and requests the necessary information from its suppliers.

3. Waste Minimisation and Recyclability

- **Packaging volume optimization**

We aim to use packaging proportionate to the dimensions of the products in order to reduce empty space and minimise the weight of waste generated. We apply

NIKIPLAST-M BULGARIA

the principles of efficient use of packaging materials and seek to avoid unnecessary packaging without compromising product protection during storage and transportation.

- **Recyclability**

When selecting packaging materials, the Company prioritises solutions that enable separate collection and recycling, taking into account the characteristics of each material and the waste management systems available. We aim to increase the use of recyclable packaging materials and reduce the generation of packaging waste.

4. Information for End Users on Separate Waste Collection

As part of our commitment to responsible waste management, we encourage our customers to separate transport packaging components and dispose of them in accordance with the rules of their local separate waste collection system.

- **Cardboard boxes, paper bags and paper adhesive tape**

Dispose of these in paper and cardboard recycling containers (blue containers). Please remove plastic adhesive tape from cardboard boxes before disposal. We recommend flattening cardboard packaging to reduce the space it occupies in collection containers.

- **Stretch film and plastic bags**

Dispose of these in plastic and metal recycling containers (yellow containers). Please follow local separate collection guidelines, as accepted materials and disposal rules may vary between municipalities.

5. Documentation and Transparency

The Company maintains the available technical documentation and information relating to the packaging materials used, including technical specifications and conformity documents provided by suppliers. Applicable documents are made available to the competent regulatory authorities upon request and in accordance with current legal requirements. NIKIPLAST-M Ltd. undertakes to review and update this Policy in response to changes in legislation, packaging materials used or the Company’s internal processes.
